

GRID ISLAND CEILING

The Grid Island Ceiling has a fully-welded, powder-coated aluminum frame with proportionally sized panels. Drop-in translucent, twin-wall polycarbonate lenses not only protect the lighting source but diffuses light equally through-out the elevator interior. Actual ceiling design and lighting requirements are dependent on the size of your elevator cab and emergency exit placement. Rectangular and square panels maybe used to adapt to the unique needs of each elevator interior.

Standard Powder-Coat Color Options

Artistic Rendering. Grid Island Ceiling with black powder-coated frame.

Our ceilings are hung from the canopy with our concealed steel bracket system and hardware. Our easy-install bracket system and detailed instructions provide you with a quick and hassle-free installation.
